

Assignment – AI Engineer (RAG)

Objective

Build an AI-powered assistant that answers employee reimbursement and policy questions using Retrieval-Augmented Generation (RAG). The assistant should answer questions using only the provided documents.

Documents Provided

- Expense Policy
- Travel Policy
- Finance Policy
- Employee Handbook

Functional Requirements

- Process and index the provided documents.
- Retrieve relevant information for user queries.
- Generate answers grounded in the retrieved context.
- Include document citations with every answer.
- Support follow-up questions in a conversation.
- If the answer is unavailable in the documents, clearly state that sufficient information could not be found instead of making up an answer.

Bonus (Optional)

- Hybrid Search
- Metadata Filtering
- Query Expansion
- Reranking
- OCR for scanned PDFs
- Incremental Indexing
- Feedback mechanism
- Streaming responses

Allowed

- You may use any programming language, framework, LLM, embedding model, vector database or AI coding assistant. We encourage the use of AI tools. The focus is on the quality of your implementation and reasoning.

Deliverables

- Source code

- Setup instructions
- Architecture overview
- Sample questions and outputs
- Design decisions
- Assumptions
- Trade-offs
- Improvements you would make with more time
